

To Whom It May Concern:

Colgate is a global consumer products company serving people in more than 200 countries and territories. We are currently accepting applications for a co-op student who is interested in working at the research and development center located in Piscataway, New Jersey. As a co-op student, you will be responsible for gaining fundamental understanding of structure and interactions of inorganic and organic compounds. You will gain experience in experimental design, sample preparation, and data analysis. You will also have the opportunity to network with other co-op students, and work together with Colgate scientists to generate invention records, patent applications and peer-reviewed publications. This position is most appropriate for a student who has a strong inorganic, organic, and analytical chemistry background, who enjoys working in the laboratory on a daily basis, and who is very careful and precise in taking measurements. This position will also require the applicant to work at least 16 hrs/week at Colgate campus. He/she will be paid based on field of study and year of graduation.
